EXCIPIENT

Sodium Stearyl Fumarate(SSF)

- Cas No:4070-80-8
- Available Grades-USP/BP/EP/NF
- Sodium Stearyl Fumarate(SSF) is a water insoluble and slightly soluble in Methanol, Sodium Stearyl Fumarate is widely explored as excipients to improve drug stability,Faster dissolution rates and shorter disintegration times.
- **Product Application:**
 - Tablet and capsule lubricant.
- **Description**
 - Sodium Stearyl Fumarate is fine, white powder with agglomerates of flate, circular-shpared particles.
- **Advantages of Sodium Stearyl Fumarates over Magnesium Stearate lubricantes.**
 - Sodium Stearyl Fumarate is a more stable lubricant than magnesium stearate. Sodium Stearyl Fumarate has a lower tendency to undergo hydrolysis or oxidation, leading to improved stability of the final product.Preferred use of Sodium Stearyl Fumarate (SSF) over magnesium stearate.
- **Properties of Product**
 - Preferred Lubricant for high degree of API compatibility.
 - Customer first choice to optimize critical formulation optioned by faster disintegration and dissolution without over-lubrication and over mixing.
 - Specific stable lamellar structure gives superior lubricant efficacy over conventional lubricants.
 - Improved drug stability and no adverse effect on bioavailability.
 - High melting point.
 - Anti adherent properties.
 - Controlled partical size.
- **Sodium Stearyl Fumarate(SSF) is Lubricant of Future.**
